QFlame. Feel fascinating heat.

QFlame turns your moments into impressive experiences. Thanks to the high-grade quartz glass fire bowl you will experience the comforting heat of fire.

Use QFlame as a stylish, outdoor fire and light element for an illuminating and evenly warming environment.

Product description

QFlame consists of 100% highly purified quartz glass. The properties of this untreated material merges the power and heat with the beauty of fire. The rough, opaque outer surface breaks the light of the flame and diffuses it. Consequently the bowl lights up in an even orange and red to thus create a relaxed and comforting atmosphere. The smooth, inside surface of the fire bowl is easy to clean. It is heat resistant up to 1,300°C and can be operated with various types of fuel. We currently offer three different sizes.

Base and cover

Place the QFlame fire bowl on a heat-resistant and fireproof base structure, stone or gravel base to guarantee secure positioning and an adequate distance to the ground.

A high-grade base and stainless steel lid are included in the scope of delivery. Various variants and materials, such as a concrete variant, are planned.

Available in three sizes.

ø 56 cm

H 38.5 cm

ø 64 cm

H 45.5 cm

ø 71 cm

H 49.6 cm

Base and stainless steel lid as well as outdoor protection are included in the delivery scope.
